

GTRI's Technology Services for Healthcare Providers

There's no other industry in which communication is more vital. To offer the best in patient care, you've got to share information more quickly and effectively than ever before. At GTRI, we're committed to developing seamless, custom-built communications solutions that allow you to improve point-of-care service—while driving down costs.

Our strategic solutions enable our healthcare customers to:

- Access critical information from a patient's bedside,
- Immediately locate staff and resources,
- Connect and communicate across multiple sites in real-time,
- Eliminate disruptive overhead paging and notifications,
- Centralize and streamline scheduling,
- Enhance services for families and other visitors, and
- Much more.

Customized healthcare solutions that drive real results

GTRI is uniquely qualified to drive real results for healthcare providers. We offer :

Comprehensive IT expertise. To help our healthcare customers address their challenges, we draw upon our wide range of IT competencies, which includes expertise in wireless, IP telephony, unified communications, and security technologies.

End-to-end solutions. We can do it all: perform a needs analysis, design and architect your solution, implement the technology, and provide user training.

Remote monitoring and management services. After we have your new solution in place, we can provide monitoring and ongoing support to keep your systems healthy and operating at peak efficiency.

Commercial and federal healthcare experience. We serve many of Colorado's most prominent hospitals and healthcare organizations, and we're experienced in working with federal healthcare agencies.

Custom application development. In addition to our standard alerting, paging, and texting applications, we can design and develop custom applications to your specific requirements.
